~~532. a~~ 7.

ALMANACK

AND

PROGNOSTICATION

for the year of our Lord

Christ, 1643.

Being the third yeare after *Bissextile*, or,
Leap-yeare, and since the Creation
of the world, 5592.

Calculated for the Meridian, longitude
and latitude of the ancient Towne of
Northampton, or middle parts of the
Kingdome, and may be generally
usefull for the whole Island.

Per THO. WILKINSON *Astrophil.*

Cœli enarrant gloriam Dei, &c.

LONDON,

Printed by F. K. for the Com-
pany of Stationers.

Vulgar and common Notes of

The *Julian* or *English* Account for the
year. 1643. The *Gregor.* or beyond
sea Account for this
year. 1643.

Wilkinson.

1643.

A Prognostication for the
yeare of our Lord God

1643.

*Being the third yeare after Beſextile or
Leape yeare.*

With many necessary, and usefull rules,
and observations for all sorts of people,

Some things for Mathematicians, for
Physitians, and Chyrurgians other things,
and some for pleasure and delight.

Collected and set forth by
THO. WILKINSON.

For the Meridian of the ancient Towne of
NORTHAMPTON.

*Poteſt qui ſciens eſt multos ſtellarum effectus aver-
tere, quando naturam Earum noverit, & ſcip-
ſum ante illarum eventum preparare.*

Ptolom. Centiloque. 5.

London Printed by E. P. for the Company
of Stationers.

1643.

A Table Shewing the Interest of any Sum of Money from 2s. 6d. to 400 li. for any time within one year after 8 per Cent. being very usefull for the casting up of any Interest behind, upon forfeited Bonds, and generally necessary aswell for borrower as lender.

A compendious Description of the foure
quarters of this present year, 1643.

Being the Spring of all the seasons in the year,
is the pleasantest, most desired, and the time in
which (for the most part) we the Inhabitants
of England, doe begin the year (though somewhat
deviating from the usuall, and common tracke) I
will first treat of that.

Ver. The Spring, Vt inquit a Varro viro edicatur,
et tuum omnia vire incipiunt. This quarter is
hot and moist, Sanguine, compared to Child-hood,
and begins the tenth day of March, being Friday,
at five an houre after three of the clocke in the after-
noone. At which instant the Sun enireth into the
first scruple of the Equinoctiall signe Aries, equal-
ling the day and the night, to us and the whole
world (except in those places, where either of the
poles are Zenith) and continueth untill the Sun
hath passed through these three Vernall signes, V
and II.

Omnia jam virent, jam formosissimus Annus,
— redolent ipsis in vepribus herbae.

Of the Summer Quarter.

Aestas. Summer so called, Ab aestu quia Sol in aestu
maxime calet, aer ardet & spica arer. This quarter
hot and dry, choleyckie resembling Man-hood.
and takes a beginning on Sunday the 11 of Iune, 6
minutes after 7 of the clocke in the afternoone, the
degree and 4 minutes of the hot and dry signe Sa-
corius then ascending, and the Sun then approa-
ching the first minute of the Solstitiall sign Cancer,

Wilkinson. 1643.

making our longest day and shortest night, and la-
seth the progression of the Sun through 3 Equiva-
lignes, S A and M.

Quod gremio natura fovit, jam frugifer Aëstus
Maturat. —

Of the Autumne Quarter.

Autumnus, quasi augere, dicitur, because at that
time fruits and corne are increased. It may also be
called the fall of the Leafe, from that of Virgill.

Quam multa in hylis Autumni frigore primo
Lapsa cadunt folia. —

This quarter is cold and dry, melancholly, com-
pared to declining age, and both initiate upon
Wednesday the 13 day of September, 7 minutes after
10 of clocke in the morning, the 13 degree, and this
minute of the cold and moyst sign Scorpio ascending
the Sun then making his ingresse into the other
Equinoctiall signe Libra; againe equiballacing the
day, and the night with us, and all the world (ex-
cept in the two poynts aforesaid) and lasteth untill
the Sun hath passed through the three autumnal
signes, A m and T.

Poma dat & gratos Autumnus ab arbore fructus.

Of the Winter Quarter.

Hymens. The Winter, Sic dicta από τῆς ὕμης, Pluviosum
quod id tempus pluviosum sit. This quarter is cold
and moyst, slegmatick, resembling decrepit age, and
enrth on monday the 11 of December, just at nine
of the clocke at night, at which time the Sun en-
treth into the first scruple of Capricornus, and con-
tinues untill the Sun hath waded through these
brumall signes, V ♄ and X.

Ver, æstas, Autumnus habent sua gaudia, Bruma
attrahit adyventu, nil nisi tristefuo.

Of the Eclipses that will happen this present year, 1643.

FOUR times will the Luminaries, or glorious Lamps of heaven be eclipsed, or lose their light this present year, twice the Sun, and twice the Moone. But of these, onely one, of the Moone will be apparant to us, the Inhabitants of England, which will happen upon Sunday, the 17 day of September, 40 minures past 6 of the clocke at night: at which time the Moone will be darkened seaven digits. This Eclipse will begin 25 minures after 5 of the clocke at night, and end 55 minures after 7 of the clocke. So that from the beginning to the end will be 2 houres and 30 minures. As for the position of the heavens at the same time the Moone is in the 4 degree, 17 minures of the fierp signe ARIES about an houre high, in the 12 house in conjunction with the malevolent Planet Saturne, ♄ is in the same house. ♂ ☉ ♀ and ♀ who is Lady (as Astrologers call her) of this Eclipse are all in the 6 house of the heavens: Dome infirmitatum, what influence these Con- tingents may produce, I for my part forbear to di- late, lest that by the ignezant and illiterate, I should be taxed for a brains-sicke and too too scru- tulous a speculator: Yet to satisfie those that desire to know further of the Signification of this Eclipse, I will here relate what Astrologers write hereof: They say that when Venus Deliquit sic Domina homini- bus præbet corporis sanitatem, ac decorem, animi tran- quilitatem, frugiferos annos, & fortunatos, honores, lætitiâ, fortunata conjugia, unmerosum sobolem, gra- tiam in omni conversatione, divitiarum incrementa, mundum victû, honestatē, reverentiâ in religione, bonâ nomen, ac famam apud potentiore. Conciliat enim gratias, necessitudines regum. Plebei a nobilibus non

Dissentient, legem, & jura servabunt. In acre temperatos ventos, & humidos; fecundas constitutiones, serenitatem, tempestivos imbres, atque pluvias salubres dimittit. In aqua & mari navigationes felices, & lucrosas, fluminum utiles exundationes; Copiam animantium ad vitam utilium, frugum abundantiam, commoditate sive alias confert maximas, vid. *Lunarium* de stellis fixarum observationibus.

The nature and qualities of the seaven Planets,
and the 12 Signes of the Zodiacke.

H is cold and dry, intemperate.
V is hot & moist temperate, but more hot then moist.
S is hot and dry, intemperate, burning.
C is hot and dry, temperate.
M is cold and moist, intemperate.
J is variable, moist with the moist, and dry with the dry.
D is cold and moist, intemperate.
V and **L** are hot and dry, fiery.
M and **P** are cold and dry, earthy.
T and **E** are hot or moist, airy, or windy.
S and **X** are cold and moist, watery.

Generall rules and observations, collected out
of diverse Authors, whereby any one may proba-
bly conjecture of the disposition of every day
throughout the whole year, by the
mutuall aspects of the
Planets.

H In the Spring and Au-
S tumne wind and raine.
V In Summer haile and
E thunder.
T In Winter continuall in-
D undations.

Also there commonly followeth great mutation,
and change of weather, as often as there is a * as-
pect of ♀ with ☉, or of ♀ with ♄, or in a △ aspect
of ♀ with ♀, which aspects are commonly called of
Astrologers, *apertio Portarum*; the opening of the
gates of Heaven, because they doe move and trou-
ble the aire, and causall notable change of wea-
ther.

♂ In ☉ ec. cause } In the Spring and Sommer,
 } raine, haille, or Thunder.
 } In harbest and winter, cold
 } rain, or Snow.

♂ In ☉ ec. ingene- } In Spring and harbest cold
 } rain or Haille.
☉ der in cold Agns } In Sommer, thunder, rain,
 } or darke weather.
 } In winter, snow and frost.

♂ In ☉ ec. pro- } In winter and spring cold and
♀ duce } raine.
 } In Summer, mitigation of
 } heat.

♂ In ☉ cause } In winter cold and raine.
♀ } In Spring and Harbest tempestu-
 } ous winds and wet.

 ♂ cause } In dry signes, .i. e. V. L. & Z. In
 } drought.

Wilkinson. 1643.

In Spring and Autumne, raine & moist weather.
 In winter a cloudy and darke day.
 In Spring and Autumne wet and cloudy weather.
 In winter, turbulent ayre, & snow,
 & boisterous winds, and sometimes thundering and lightning.

All these Aspects you have in the Almanacke, as they variously happen.

Note that what is here said of the ♀ ♀ and ☐, the same is likewise meant of the * and △ aspect, but they are of lesse and weaker force.

To judge of the weather to come, by the sign wherein the Moone is at the change, Quarters or full.

When the Moone shall change, enter into the first or last Quarter, or come to the full in ♋ or ♎, in the winter commonly there followeth fair weather, but in Sommer immoderate heat, especially if it be in June or July.

If the change, full, or Quarters chance in Taurus, Virgo, or Capricornus, in Winter, tudge of cold, frost or snow. In Sommer it is a signe of temperate weather.

When the said times happen in Gemini, Libra, or Aquarius, it prognosticateth much wind, especially in Autumne or the Spring.

And when the said times fall in Cancer, Scorpio, or Pisces, in winter looke for moist weather and raine to follow, but in Sommer it foresheweth pleasant temperate weather to come afterwards.

Wilkinson: 1643;

A Sheame or Figure, whereby any
(though of the meanest capacity) may without
helpe of any Arithmetical calculations,
readily find out the Planetary hower, for
any day in the Yeare, a thing ve-
ry usefull, & much desired.

In the Center *A*, there must be fixed a thread, with
a moveable bead.

The use of the precedent Figure.

FO: the day proposed, get the houre and minute
of Sun-rising, to which, in the uttermost lymb,

by the third, and bring the head to the Horizontal
line, then the third laid to the houre proposed, in
the said utter limbe, the head will fall directly up-
on the houre required: as for example, I would
know the planetary houre upon Friday, the tenth
day of March, at 4 of the clocke in the afternoone,
I looke in the Almanacke at what houre and min,
the sun riseth that day, and I find it 6 ho: 0 min.
whereunto in the uttermost limbe, I lay the third,
and bring the head to the Horizontall line, then I
remove the third to the said houre of 4, in the said
utter limbe, and the head doth fall upon the begin-
ning of the eleventh houre, which is the houre de-
sired. Note that the houres in the utter limbe,
represent the houres of the clocke, the crooked
lines above the horizontall line, the planetary
houres of the day, and the crooked lines, under the
horizontall line, the planetary houres of the night.

Having found the planetary house as aforesaid
the Planet that rules that house is had
by the Table following.

Sunda.	Mond.	Tuesd.	Wednes.	Thurs.	Frida.	Satur.
☉	☉	☾	☾	♂	♀	♂
1	8	5	12		9	6
2	9	6	0	3	10	7
3	10	7	0	4	11	8
4	11	1	8	5	12	2
5	12	2	9	6	0	3
6	0	3	10	7	0	4
7	0	4	11	1	8	5

Rulers of the Night

The use of the former Table.

Find the day proposed in the head of the Table, and in one of the 2 rows under the same day, find the Planetary houre, against which in the first row upon the left hand is the character of the Planet that governeth that houre of the day, and upon the right hand is the Planet that ruleth that houre of the night. As upon Thursday, Λ governeth the first houre of the day, and J the same of the night.

h Is retrograde from the 8 of Iuly, until the 24 of November, at all other times he is direct.

Λ Is retrograde from the 4 of August, until the 28 of November, at all other times he is direct.

S Is direct all the whole year.

Q Is retrograde from the 19 of January, to the second of March, at other times he is direct.

P Is retrograde from the $\left\{ \begin{array}{l} 13 \text{ of March, till the } 5 \text{ of April.} \\ 9 \text{ of Iuly, to the first of August.} \\ 2 \text{ of November, till the } 23. \end{array} \right.$

At all other times he goes according to the succession of the Signes.

Elections and Observations concerning Husbandry.

Sow most seedes, and plant in most ground, a little before the change of the Moone.

Sow dry seeds, and plant in dry ground, in the new of the Moone, or neere the full.

Sow all kind of seeds the Moone increasing in light, and swift of course: For if she be combust, decreasing and slow of motion, the increase will be but small.

Neither plant nor graft, the wind in the North, or East This considered plant, and graft generally the Moone increasing in S .

Remove and set young trees in the last \square the Moone in S or V in September, October, November, December, January, or February.

Sow all kind of coynes, the Moone increasing in S .

Gather fruit, at 02 presently after the full.

Fell timber in the last quarter, the Moone under the earth and aspect of Saturne.

Cut hawke, and sheere sheepe, to make their wool grow fast and thicke in the increase of the Moone.

Manure your field to bring plenty of grasse in February, the Moone increasing.

But mucke your land to kill the weeds, the Moone decreasing.

Observations concerning Navigation.

In all touring by water, sic that the Moone bee not impedit by γ , 02 δ , 02 with Pleiades, 02 Hyades, 02 with Cor Scorpii, 02 with the head of Medusa, 02 with other fixed Stars of a malignant nature.

Let not the Moone be in the 1.6.02 8 house, nor receiver of any of their lordes.

Let not the Moone be in Via Combusta, vel lactea, for then the Traveller in that journey shall be sicke 02 suffer great troubles.

At thy going to Sea if thou desire to dispatch thy businesse, and return quick, let the Moone be above the earth in the 7.9. 10 02 11 house, in a watery sign, especially in δ .

Set not forth to Sea, when the Lord of the Ascendent, 02 of the place of the Moone, is in the 6. 8. 02 12 house: for then imprisonment, 02 sicknesse is to be expected.

Sayle not when the Moone is with a planet that is retrograde, 02 when the Lord of the Ascendent is retrograde; for either some misfortune will happen in the way, 02 else it will be long before thou come to thy journeyes end.

If thou wilt have a prosperous journey from the beginning to the end, Let the Moone separate from a fortune, and apply to a fortune at the very instant of looking from the shore.

As for Short Journeys by land, set not forth when there is an evil planet in the 3 house, neither when the Lord of the 3 house is Combust, retrograde, or joined with an evil planet, or in his fall: for these beoken mischance, and ill successe in thy journey.

Elections in administering of Purging Physick:

It is not good to take Physicke in the time of extreme heate, or cold. The Spring and Autumne are the most convenient times. But if necessity so require, purge in Summer by vomit, and in Winter by Stool.

The fittest times to purge, is when the Moone is in ♊ or ♋ , or in the first halfe of ♌ or ♍ .

Purge with Electuary	{ Chollic Flegme Melanchollic	{ the in	{ in Δ , or * of ♀ not
			{ Combust.
			{ in Δ , or * of ☉
			{ in Δ , or * of ♀.

Purge with Potions	{ Chollic Flegme Melanchollic	{ the in	{ in Δ , or * of ♀
			{ not Combust.
			{ in Δ , or * of ☉
			{ in Δ , or * of ♀.

Purge with Pilles.	{ Chollic Flegme Melanchollic	{ the in	{ in Δ , or * of ♀
			{ not Combust.
			{ in Δ , or * of ☉
			{ in Δ , or * of ♀.

The time to purge when the Moone is boyd of course is indifferent, so it is also, when she hath equall testimonies from the fortunes and infortunes.

Purge not when the Moone is in Signes Ruminant, i. e. which chew the Cud, as ♊ and ♋ , or joined to retrograd planets; for they cause vomiting, nor aspected of ♄ , for he hindreth the working of the Physick. Nor of ♅ , for he causeth it to worke violently, nor in ♌ with ♍ , for he strengtheneth nature against the Physicke.

Wilkinson. 1643.

Of the Yeare.

The yeare containes } Solar 12.

with monethes } Lunar 13.

In a yeare are weekes 52, dayes 365, houres 8766.

In all legall matters, the yeare doth not begin with us the Inhabitants of England) un till the 5 day of March. But the Iulian yeare begins alwayes the first of Ianuary.

In matters of Law we account the day but from Sun rising to Sun setting. Therefore whosoever is bound to pay a sum of money on a set, or certaine day, need not tender it before Sun rising, nor after Sun setting. But in Indictment's of murder, we reckon the day from midnight to midnight. Astronomers begin the day yesterday at noone, and end to day at noone, accounting from 1 to 24 houres.

Of measures Geometrical.

Three barley cornes in length make an inch, 12 inches make a foot, 3 foot make a yard, 5 yards and a halfe or 26 foot and a halfe, make a Carre rich or pole, 40 perches make a furlong, eight furlongs make an English mile.

So then an Eng- lish mile con- taines	{	Perches. 320.
		Yards. 1760.
		Feet. 5280.
		Inches. 63360.
		Barley cornes. 190080.

In Here by Statute containes 40 perch in length, and 4 in breadth, or 160 square perches.

A foot of timber, containes 1728 square inches, and a foot of glass or board containes but 144 In-

THus to satisfy the earnest request and importunity of some intimate friends. I have divulged these my rude and indigest collections (the first fruits of a plumbeous cerebrofity) hoping that they will be acceptable to all, and offensive to none. Yet *Omnia placere difficillimum*. But if there be any one so maliciously envious, and ingratefull as to reprehend and find fault with, what is here carefully and painfully collected for a common good, these my endeavours attend him not. *Hæc enim propter Momos, & invidios non sunt scripta*. I doubt not but my Countrymen and welwishers, (with those who doe reape the benefit of my paines) will aspect me with a Δ which will not onely, encourage me to write againe the next yeare, but also ere long (if God permit life) set forth something else, which will be more pleasing and profitable, these being but the Embrions (I hope) of a timely (though long expected) birth. And so Courteous Reader till the next yeare adue.

Vir sapiens dominabitur astris.
